Completion:	2014

A light structure ...

... of a twelve edged levitating saddle graces the BEEHIVE Shopping mall at Nonthaburi.

This tensile construction is built in a city of Thailand with ancient roots of religious architecture which was famous for durian and mandarins.

An eye catching ...

... artistic design connects two sections of the shopping mall under a shade. The translucent fabric gives additional daylight and protects against glaring sun and rain. This wonderful white dressed light weight structure creates an area with a communicative atmosphere like a market place, but generates as well spots with calming effect for recreation breaks in a mood of peace.
