Quantity:	600 sqm
Concept & Design:	VELABRAN, Munich, Germany
Manufacturer:	VELABRAN, Munich, Germany
Client:	City of Mögglingen
Completion:	Summer 2019

A heart for bats

Our customer Velabran from Munich was commissioned for this aesthetically appealing structure: its most important function is to safe bats from flying into the cars on this new bypass near the small German town Mögglingen. It's made of 600 sqm opaque material. The not-translucent property was of course of minor importance for the bats. This is rather a comfort issue for the drivers who would usually be blinded by the setting sun on this part of the road.
